```
sequenced and submitted once, so the sequence for the remainder of
the insert may be found in the record for the adjacent clones.
Overlapping clones are noted at the beginning and end of the
Features listing.
```

gene

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, RepeatState of the control of

unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguittes or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base: quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

Miyajima,N., Tanaka,A., Kotani,H., Nomura,N. and Ohara,O.

Prediction of the coding sequences of unidentified human genes.

VII. The complete sequences of 100 new cDNA clones from brain which can code for large proteins in vitro

DNA Res. 4 (2), 141-150 (1997)

       CC structural similarity with semaphorin proteins, protein/eptide hormones of the neurohypophysial family and oxytocin (neurophysin 1 precursor) of the neurohypophysial family and oxytocin (neurophysin 1 precursor) of techniques for treating symptomatric or phenotypic manifestations of committee the normal function of NHP in the body. Nucleotide constructs concoding NHP products are useful in gene therapy for modulating NHP cc expression. The constructs can be used to genetically engineer host cells of the expression of the products in vivo, these genetically engineered cells cc expression as bioreactors in the body delivering a continuous supply of a complete constructs of the constructs of the protein to the body. The sequences cc also find use in molecular mutagenesis/evolution of proteins that are classified the proceeded by the NHP sequences. The encoded NHP polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for compounds that are useful in the treatment of mental, biological or medical disorders and diseases. The present of sequence represents a NHP polypeptides are useful in the treatment of the constructs and diseases. The present of the constructs and diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2461

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and coding sequences of the invention can be used in the isolation of similar genes and proteins, in the elucidation of their function in vivo, and to treat a number of conditions. It is possible that they may have uses as nutritional supplements, as cytokine or cell proliferation factors, in immune modulation, where they may be used to treat immune and autoimmune diseases, as haematopoiesis regulators (treating myeloid or lymphoid cell deficiencies), in the promotion of tissue growth, they may have chemokine or chemotactic activity, haemostatic or thrombolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New secreted proteins and polynucleotides encoding them, which are derived from Homo sapiens, useful for therapy, diagnosis, and research, as well as nutritional sources or supplements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 26; Page 249-250; 309pp; English.

                                                                                                                                                                                                                                                                                                                                                             expression. The constructs can be used to genetically engineer host cells to express NHP products in vivo, these genetically engineered cells to express NHP products in vivo, these genetically engineered cells function as bioreactors in the body delivering a continuous supply of a NHP, a NHP peptide, or a NHP fusion protein to the body. The sequences also find use in molecular mutagenesis/evolution of proteins that are partially encoded by the NHP sequences. The encoded NHP polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders and diseases. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel human secreted proteins (NHP) that share structural similarity with semaphorin proteins, protein/peptide hormones of the neurohypophysial family and oxytocin (neurophysin 1 precursor) family. The NHP nucleotide sequences are useful in drug screening techniques for treating symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding NHP products are useful in gene therapy for modulating NHP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polynucleotides encoding human proteins that share structural similarity with semaphorin proteins, protein hormones of neurohypophysial family for drug screening, diagnosis and therapy of biological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         20-MAR-2001; 2001WO-US08834.

The present sequence encodes a human semaphorin polypeptide, designated ZSWF-16. ZSWF-16 is a neurite growth and development modulator. It also enhances spinal cord and sensory neurite outgrowth and patterning, and is involved in the activation and regulation of T lymphocytes suppressor. ZSWF-16 is useful for detecting a genetic abnormality or cancer. ZSWF-16 polynucleotide probes can be used to detect 3p21 loss, trisomy, duplication or translocation associated with mammary tumour tissue, breast tumour, liver, small intestine, bone cancers, etc. ZSWF-16 can be used to modulate neurite growth and development and demarcate nervous system structures. ZSWF-16 are also useful for regenerating and directing injuries, paralysis caused by spinal injuries, and for treating neurodegenerative diseases such as amyotrophic lateral sclerosis,

Claim 2; Page 116-121; 124pp; English.

ZSMF-16 also acts as a mediator of immunosuppression, and thus useful for diagnosing and treating autoimmune diseases such as insulin dependent diabetes, rheumatoid arthritis, and multiple (x) sclerosis. It can also be used as an antiinflammatory for inhibition. of antigen in humoral and cellular immunity and for immunosuppression, in graft and organ transplants.

                                                                                                                           breast tumour, liver, small intestine, bone cancers, etc. ZSMF-16 can be used to modulate neurite growth and development and demarcate nervous system structures. ZSMF-16 are also useful for regenerating and directing neurite outgrowths following strokes, brain damage caused by head injuries, paralysis caused by spinal injuries, and for treating neurodegenerative diseases such as amyotrophic lateral sclerosis, Alzheimer's diseases such as amyotrophic lateral sclerosis, Alzheimer's disease, Huntington's disease, Parkinson's disease and peripheral neuropathies, or demyelinating diseases e.g., multiple sclerosis. ZSMF-16 also acts as a mediator of immunosuppression, and thus useful for diagnosing and treating autoimmune diseases such as insulin dependent diabetes, rheumatoid arthritis, and multiple sclerosis. It can also be used as an antiinflammatory for inhibition of antigen in humoral and cellular immunity and for immunosuppression

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ZSMF-16 is useful for detecting a genetic abnormality or cancer. polynucleotide probes can be used to detect 3p21 loss, trisomy, duplication or translocation associated with mammary tumour tissu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present is a degenerate sequence encoding a semaphorin, designated ZSMF-16. ZSMF-16 is a neurite growth and development modulator. It also enhances spinal cord and sensory neurite outgrowth and patterning, and is involved in the activation and regulation of T lymphocytes suppressor.
                                                                                                           in graft and organ transplants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 3; Page 123-124; 124pp; English.

This is the mouse Semaphorin-H polynucleotide sequence (Sema H). The Semaphorin/Collapsin family of molecules are characterised by a unique and highly conserved motif, within a 500 amino acid semaphorin domain. Some semaphorins exhibit inhibitory or repulsive functions in a neuronal context, and functions in bone structure formation are also implicated. It is thought that Sema H plays | a role in metastasis. The invention uses It is thought that Sema H plays | a role in metastasis. The invention uses It is semaphorin the mouse Sema H plays are used in the methods of the polynucleotides and polypeptides are used in the methods of the invention, the polypeptides are luseful for determining the metastatic potential of cells, by detecting their expression in biological samples. Antibodies specific for Sema H, are also useful therapeutically in inhibiting Sema-H polypeptides activity and therefore metastasis, and for purifying the polypeptides. Metastasis may also be inhibited by inh inhibiting the biological activity of the polypeptide using e.g. a small molecule inhibitor or a Semaphorin-H ligand (or fragment). The polynucleotides can also be used to inhibit polypeptide expression in polynucleotides can also be used to inhibit polypeptide expression in cells using known antisense technology e.g. to prevent metastasis of cancer cells. They can be used to detect and quantify Sema-H mRNA levels in cells. The polypeptides, fusion proteins, multimeric proteins, in cells. The polypeptides, fusion proteins, multimeric proteins, antibodies or antisense oligonucleotides can be included in antibodies or amongositions. The polynucleotides can be used to isolate similar sequences from other species and to produce mammalian cell lines and tumours with known metastatic potential, useful in anti-metastatic drug screening.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is the mouse Semaphorin-H variant (Sema Hy) polynucleotide sequence (Sema Hy). The Semaphorin/Collapsin family of molecules are characterised by a unique and highly conserved motif, within a 500 amino acid semaphorin domain. Some semaphorins exhibit inhibitory or repulsive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; Page 85-91; 95pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             of metastatic cancer
